SMART DVB is a complete product line for visual analysis and monitoring for digital broadcast distribution system operators. SMART DVB delivers comprehensive insight of operational integrity and stream availability through monitoring, analysing and recording stream content, its parameters, standards compliance and service configurations.

SMART-MV-40

SMART-MV-40 is an enhanced multiviewer, combined with 24x7 analysis and in-depth monitoring of your DVB transport streams. Get notified in case something happens. Configure your setup and view the alarm logs using remote or local GUI. The multiviewer output can be sent over UDP or SRT.
